

Laurel Class

Spring Term Topic Homework

This term we will be investigating the question “Where does all the water go?” We will learn all about different rivers around the world, the stages of the water cycle and how to save water and help save the planet.

Your homework challenge is to create something which can showcase your learning about any of these ideas.

You could create:

- A fact file about a famous river in another country. Can you include facts like the location, length, tributaries?
- A 3D model of a river, or one of its features such as a waterfall, river bed, or meander.
- A poster describing the water cycle
- A poster reminding people to save water

The choice is yours!

We are excited to see what you create. Please bring your homework to school in the week commencing 23rd March so that we can share them in class before the Homework Festival that week.
